Fountain Designs

ENHANCE an empty space in your home ...

IMPROVE your existing playground ...

& ENJOY quality time with your children at play ...

Our designs are products of our artistic imaginations, we also accommodate a BYOD (Build Your Own Design) concept of fountains, satisfying the aspirations of our clients.

From the MAIN fountain down to its sub-components, all design layers can be customized chosen from a wide range of frame structures that produces a variety fountain output.

THE CORE (Center / Main Structure):

The main fountain structure can be either chosen from our readily available submerged designs or customize a build-up structure to project an aura of connectivity of the fountain to its location.

THE SHOW (Mid Layer):

The secondary layer of the fountain is the middle of the three fountain layers, it is usually the show catcher since it is designed to have attractive mechanical / moving nozzles.

THE STRETCH (Outermost Layer):

Usually the last layer of the fountain structure, it is made of three to four parts in an arc or straight frame. This part is the layer that distributes the water from the outer part going to the core.

THE ANCILLARY (Secondary / Accessory):

These are nozzles / parts that are built outside the main frame with attractive stand alone show.
